

**MODULAR GALLEY FOR AN AIRCRAFT OR TRAIN AS WELL AS
WALL AND MODULE FOR SUCH A GALLEY AND AIRCRAFT
AND TRAIN EQUIPPED THEREWITH**

ABSTRACT OF THE DISCLOSURE

The invention relates to a modular galley for an aircraft or train. The modular galley has a wall provided with a multiplicity of guides running in the vertical direction with undercuts as well as a multiplicity of essentially block-shaped modules. The modules have runners on the rear that can be accommodated in the undercut slots, the cross-sectional shape of which, viewed in the horizontal plane, corresponds to the cross-sectional shape of the undercut slots, viewed in the horizontal plane. The modular galley furthermore has lifting means for raising or lowering a said module.
